

# **Global Markets Roundup**

Middle East geopolitical risks have intensified, and investors' cautiousness has increased ahead of the Federal Reserve's upcoming meeting

- Global equity markets traded sideways in the past week, with risk sentiment deteriorating after Israel launched a strike against Iran focusing on nuclear facilities (operation "Rising Lion"). Energy sector stocks substantially overperformed (MSCI ACWI Energy: +5.1% wow), as international oil prices surged by +12% wow to \$74/barrel, on concerns for possible supply disruptions (see graphs page 3).
- Government bond yields eased, somewhat more so in the US following also a lower than expected CPI inflation print for May (+2.4% year-over-year). The US Treasury 10-year yield decreased by -9 bps wow to 4.42% and its 2-year peer by -9 bps wow to 3.96%. As interest rate differentials versus euro area core sovereign bonds narrowed, the US Dollar depreciated to EUR/USD 1.1558, a 3½-year low.
- Iran's crude oil production of c. 3.3 million barrels per day, represents slightly above 3% of global supply. The manageability of a possible disruption in flows from Iran, is linked, *inter alia*, to OPEC+ policies, and especially of Saudi Arabia. Note that Saudi Arabia's producers still operate well below capacity, with supply being voluntarily held down to c. 9 million barrels per day and spare capacity at its highest level in the past twenty years excluding the GFC and covid-19 crisis (see graph below).
- Right tail risk scenarios that could lead to significantly higher oil prices, depressing economic activity and risk asset pricing include: (i) a broadening of the conflict in the Middle East as the fighting between Isreal and Iran enters its fifth day and (ii) the disruption of oil and natural gas flows through the Strait of Hormuz (SoH). The SoH is located between Oman and Iran and is the primary export route for oil produced by Saudi Arabia, Kuwait, Qatar, Iran, Iran and the UAE, with circa 30% of world's seaborne oil trade and 20% of global LNG exports (Qatar, UAE) moving through the SoH.
- Geopolitical risks add another layer of complexity, on top of trade uncertainty, for central banks, *inter alia* as an increase in oil prices, if sustained, could have ramifications to the upside for inflation and to the downside for activity. Attention in the current week mostly turns on Wednesday June 18<sup>th</sup> to the FOMC meeting. The Fed is expected to stand pat at a range of 4.25% 4.50%.
- Attention will turn to the press conference, as well as the quarterly economic projections and the FOMC members' assumptions for the appropriate path of monetary policy. In the previous round of projections (March), FOMC members' median assumption called for an FFR of 3.75% - 4.00% at end-2025, implying two cuts of -25 bps each by then. Market implied expectations, according to FFR futures pricing, also point to cumulative rate cuts of -50 bps in the second half of 2025.
- The Bank of Japan stood pat on June 17<sup>th</sup> (short-term rate of +0.50%), in view of an unclear international trade environment and a less benign outlook regarding economic momentum. The latter led the BoJ to a weaker guidance towards further rate hikes.
- At the same time, the BoJ made modifications in its bond purchases drawdown plan. In July 2024, the BoJ has decided to reduce its JGB gross purchases (from circa ¥5.7 trillion per month) by -¥0.4 tn in each calendar quarter. As a result, the monthly pace of purchases has come down to ¥4.1 tn (0.7% of 2024 GDP). Today, the BoJ announced that the monthly pace of purchases will continue to be reduced by -¥0.4 tn each quarter up to Q1:2026 and will decelerate to -¥0.2tn in each calendar quarter later on, for the monthly pace to reach ¥2.1tn in Q1:2027.

#### US headline job creation remains healthy

- Headline non-farm payrolls (NFP) net creation came out slightly above expectations in May. In the event, NFPs were up by +139k following a +147k in April, close to the (resilient) monthly average of +149k in the prior 12 months and versus consensus estimates for +130k. Having said that, net revisions for the prior two months were negative and significant (-95k). In May, the private sector added +140k NFPs on net (government: -1k mom, with a decline of -22k at the federal government part).
- The (relatively more volatile) total household employment, which includes the self-employed and agricultural workers, fell by -696k in May after rising by +461k in April. Still, given also a decline in the labor force participation rate by -0.2 pps to 62.4% in May, the headline unemployment rate was maintained at 4.2%, in line with consensus and remaining within the tight range of 3.9% to 4.2% it has hovered in, since February 2024. At the same time, the U-6 unemployment rate (which includes the unemployed, part-time workers for economic reasons and those marginally attached to the labor force), which is considered a broader measure of slack, was also stable at 7.8% in May.
- Meanwhile, the growth of average hourly earnings was robust in May. In the event, the monthly pace was +0.4% from +0.2% in April, versus an average of +0.3% since 2006. The annual growth was stable at +3.9%, above consensus for +3.7% and an average of +3.1% yoy since 2007. The three month-average of the monthly annualized growth was +3.8% in May from +2.9% in the previous month.

#### US CPI inflation was modesty below expectations in May

- Headline US CPI inflation came out at +2.4% yoy in May from +2.3% yoy in April (peak of +9.1% yoy in June 2022, the highest since November 1981 | +3.3% yoy in May 2024). Note though that the acceleration was minor on a 2-decimal basis, while the latest reading somewhat undershot consensus estimates for +2.5%. The annual growth of Energy prices (weight: 7%) was -3.5% from -3.7% in April, with a -1.0% mom in May 2025 in seasonally adjusted "sa" terms, being offset by positive base effects (-1.3% mom in May 2024). Food prices (14% weight) were up by +0.3% mom (20-year average of +0.2% mom), with the annual pace of growth at +2.9% from +2.8% in April (peak of +11.4% in August 2022).
- More importantly, the annual growth of core CPI (79% weight) held steady for a 3<sup>rd</sup> consecutive month at +2.8%, the lowest since March 2021 (peak of +6.6% yoy in September 2022), modestly below consensus estimates for +2.9%. The monthly growth was a relatively modest +0.1% sa from +0.2% in April (20-year average of +0.2% mom). Shelter prices (circa  $\frac{1}{3}$  of the headline CPI and 45% of the core index), posted a "norm-like" +0.25% mom sa from +0.3% mom in April (12-month average of +0.3% mom). Regarding the two major (and relatively stickier) shelter components, the index for the rent of primary residence decelerated to +0.2% mom after consistently scoring +0.3% mom in the prior 8 months (the annual growth decelerated by -0.2 pps to +3.8%, the lowest since January 2022) and the owners' equivalent rent of residences (i.e. the implicit rent that owner occupants would have to pay if they were renting their homes) stood at +0.3% mom from +0.4% mom in April (the annual growth was +4.3% from +4.4%). Excluding the dominant shelter component as well as the volatile one for used cars & trucks, core CPI was unchanged on a monthly basis in May after a +0.2% mom in April (the annual growth was +1.9% from +1.8%).

#### The US federal fiscal deficit remains particularly wide

- The US federal budget deficit was \$1.36 tn in the first eight months of fiscal year 2025 (i.e. from October 2024 to May 2025), up by \$162 bn versus the same period of fiscal year 2024 (in total fiscal year 2024, the deficit came out at a particularly wide -6.4% of GDP). That development is due to a rise of \$356 bn for outlays, while revenues have increased by \$194 bn. Net interest payments amounted to \$665 bn in the first eight months of fiscal year 2025, versus \$601 bn in the same period in fiscal year 2024. Other notable increases in net outlays per major category of spending, include Medicare (+\$92 bn to \$700 bn) and Social Security (+\$80 bn to \$1040 bn). In a contrarian note, collected customs duties rose by +\$32 bn in the first eight months of fiscal year 2025 versus the same period in fiscal year 2024, to \$81 bn. That development was mainly due to respective receipts of \$22.2 in May 2025 and \$15.6 bn in April 2025 (during which a large increase in imports tariff rates came into effect), versus a monthly average of \$6.4 bn in fiscal year 2024.
- It should also be noted that the aforementioned deficit increase is meaningfully distorted to the upside from shifts in the timing of certain payments. If not for these shifts, the deficit so far in the current fiscal year would have been \$86 bn more than the one a year ago (+0.3% of GDP). Also, part of the increase in 2025 (c. \$70 bn) stems from the postponement of some tax deadlines from 2023 to 2024, which boosted receipts in 2024 (the Internal Revenue Service had postponed certain 2023 tax deadlines until early in fiscal year 2024 for some taxpayers in federally declared disaster areas).

# Euro area real GDP growth in Q1:2025 was substantially revised up

- expenditure component), real GDP was up by a solid +0.6% on a quarterly basis in Q1:2025, following a +0.3% qoq in Q4:2024. The annual pace of growth was +1.5% from +1.2% in Q4:2024. The latest readings were significantly revised up compared with the previous estimate, which pointed to +0.3% qoq (+1.3% annualized) and +1.2% yoy. Having said that, recall that growth in both these quarters was substantially influenced to the upside by Ireland's GDP which is particularly volatile owing to activities of large-size multinational corporations. In all, excluding Ireland, euro area real GDP growth stood at +0.3% qoq in Q1:2025 from +0.1% qoq in Q4:2024, with the annual pace at +0.8% yoy from +0.9% in Q4:2024.
- Gross Fixed Capital Formation ("GFCF") was the major contributor to the headline quarterly growth in Q1:2025 (+0.4 pps), being sharply up by +1.8% qoq (+1.9% yoy), after a +0.7% qoq (-1.8% yoy) in Q4:2024. Residential investment (1/4 of GFCF) rose by +0.7% goq (-1.4% yoy), while business investment (% of GFCF) surged by +2.2% qoq (+3.0% yoy). The latter though was heavily distorted to the upside by erratic data for Ireland. In the event, euro area business investment excluding Ireland, was up by a much more modest +0.3% qoq (+1.4% yoy). Another substantial positive contribution to the headline figure came from net exports (+0.3 pps), as exports rose by +1.9% gog (+2.3% yoy), outpacing imports which increased by +1.4% qoq (+3.3% yoy). Note that exports may have benefitted partly by US importers expediting their respective activity ahead of potentially higher tariffs. Private consumption posted a modest +0.2% qoq (+1.3% yoy) after a +0.5% qoq (+1.6% yoy) in Q4:2024, adding a further +0.1 pp to the headline figure. Government consumption was unchanged on a quarterly basis in Q1:2025 (+2.1% yoy) from +0.4% qoq (+2.4% yoy) in Q4:2024, being neutral to overall growth, while subtracted -0.1 pp.

#### **Equities**

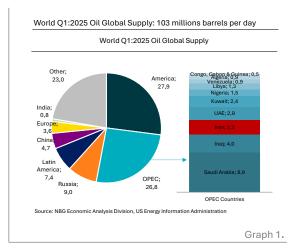

• Global equity markets have demonstrated volatility in recent sessions, linked to the Iran-Israel conflict. The MSCI ACWI was down by -0.3% wow in the past week, due to a -1.1% on Friday, as risk appetite weakened after Israel launched an airstrike against Iran. In a similar note, the S&P500 decreased by -0.4% wow in the past week, due to a -1.1% on Friday. With an ongoing exchange of missile strikes between the two countries since Friday, volatility has followed entering the current week, in view of speculation moving sideways regarding the prospect of a deescalation of the conflict. In the event, the S&P500 gained +0.9% on Monday, albeit appearing poised for losses on Tuesday June 17<sup>th</sup>. On the other side of the Atlantic, the EuroStoxx index declined by -2.2% wow in the past week (-1.1% on Friday). Gains of +0.8% followed on Monday, albeit losses of c.-1% were being recorded on Tuesday. In Greece, the Athens Stock Exchange General Index was up down by -0.4% wow in the past week (-1.1% on Friday).

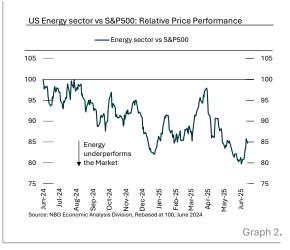

#### **Fixed Income**

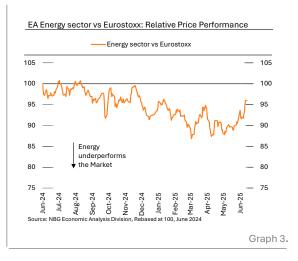

. Government bond yields eased in the past week, somewhat more so in the US following a lower than expected CPI print for May. Specifically, the US Treasury 10-year yield decreased by -9 bps wow to 4.42% and its 2-year peer also by -9 bps wow to 3.96%. A sizable (\$22 bn) auction of 30-year US Treasury bonds in the past week attracted robust demand, also contributing to lower yields. UK gilt yields also fell, -9 bps wow to 4.55% in the 10-year tenor, following a weaker than expected GDP in April. In Germany, the 10-year Bund yield decreased by a more modest -3 bps to 2.54%, while bond spreads over the Bund were slightly up in Italy (+1 bp wow to 95 bps in the 10-year tenor) and Greece (+4 bps wow to 74 bps). Speculative grade corporate bond spreads widened somewhat on a weekly basis. Specifically, USD High Yield (HY) spreads rose by +9 bps wow to 318 bps (median of 468 bps since 1997) and their EUR counterparts by +6 bps wow to 313 bps (median of 468 bps since 1997). Finally, emerging markets IG spreads were little changed in the past week, remaining though at relatively low levels and well below recent highs (indicatively, ICE/BofA Non-Financial Emerging Markets Corporate Plus Index: +2 bps wow to 219 bps, versus a median of 383 bps since 2011 and -76 bps compared with 295 bps on April 9th). The aforementioned narrowing is linked, inter alia, to a weaker US Dollar in that period (-5.4% since April 9th against emerging markets currencies, on a trade-weighted basis). A weaker USD, ceteris paribus, is supportive of corporations in emerging markets as a large portion of their debt is denominated in USD, therefore its refinancing can take place in more benign costs.

#### **FX and Commodities**

• The US Dollar depreciated in the past week, weighed by some further narrowing of interest rate differentials (e.g. US Treasury 2-year yield minus its German Bund peer: -7 bps wow to 210 bps). Indeed, the USD decreased by -1.4% wow to €/\$1.154, its weakest since November 2021. The USD's fall was much less profound against the British Pound (-0.4% wow to GBP/USD 1.36) as the latter was weighed (-1.0% wow against the euro to EUR/GBP 0.85) by weaker than expected economic data. In the event, UK real GDP fell by -0.3% mom in April (+0.9% yoy), versus consensus estimates for -0.1% mom. Finally, in commodities, oil prices surged, as the Iran-Israel conflict spurred supply disruptions concerns. In the event, Brent prices were up by +11.7% wow to \$74.2/barrel and WTI by +13.1% wow to \$73.8/barrel, with some further upside effect on prices by a fall in US crude oil inventories for a 2<sup>nd</sup> consecutive week (-3.6 mn barrels to 432 mn barrels for the week ending June 6<sup>th</sup>). Meanwhile, gold prices increased substantially by +3.7% on a weekly basis to a record high of \$3433/ounce, on the back of strong "safe haven" demand and a weaker US Dollar due to some improvement in risk appetite.

Quote of the week: "Open markets and multilateral rules are fracturing, and even the dominant role of the US dollar, the cornerstone of the system, is no longer certain.", President of the European Central Bank, Christine Lagarde, June 17<sup>th</sup>

#### **Economic Calendar**

In the **US**, apart from the Federal Reserve's meeting, attention will be on May's retail sales, as private consumption represents c. 70% of US GDP. A plethora of other central banks also meet in the current week, with respective monetary policies being in somewhat diverse phases due to, *inter alia*, different inflation dynamics. **The Bank of England** (June 19th) is expected to remain on hold after reducing its Bank Rate by -25 bps to 4.25% in its most recent (May 7th) meeting. The prospect of lower policy rates remains in the second half of 2025, as the rise of CPI inflation to +3.5% yoy in April from +2.6% yoy in March, is estimated to be due to one-off factors.

In the **euro area**, the European Commission's consumer confidence indicator for June will be watched.

#### **DISCLOSURES:**

This report has been produced by the Economic Research Division of the National Bank of Greece, which is regulated by the Bank of Greece, and is provided solely as a sheer reference for the information of experienced and sophisticated investors who are expected and considered to be fully able to make their own investment decisions without reliance on its contents, i.e. only after effecting their own independent enquiry from sources of the investors' sole choice. The information contained in this report does not constitute the provision of investment advice and under no circumstances is it to be used or considered as an offer or an invitation to buy or sell or a solicitation of an offer or invitation to buy or sell or enter into any agreement with respect to any security, product, service or investment. No information or opinion contained in this report shall constitute any representation or warranty as to future performance of any financial instrument, credit, currency rate or other market or economic measure. Past performance is not necessarily a reliable guide to future performance. National Bank of Greece and/or its affiliates shall not be liable in any matter whatsoever for any consequences (including but not limited to any direct, indirect or consequential losses, loss of profits and damages) of any reliance on or usage of this report and accepts no legal responsibility to any investor who directly or indirectly receives this report. The final investment decision must be made by the investor and the responsibility for the investment must be taken by the investor.

Any data provided in this report has been obtained from sources believed to be reliable but has not been independently verified. Because of the possibility of error on the part of such sources, National Bank of Greece does not guarantee the accuracy, timeliness or usefulness of any information. Information and opinions contained in this report are subject to change without notice and there is no obligation to update the information and opinions contained in this report. The National Bank of Greece and its affiliate companies, its representatives, its managers and/or its personnel or other persons related to it, accept no responsibility, or liability as to the accuracy, or completeness of the information contained in this report, or for any loss in general arising from any use of this report including investment decisions based on this report. This report does not constitute investment research or a research recommendation and as such it has not been prepared in accordance with legal requirements designed to promote investment research independence. This report does not purport to contain all the information that a prospective investor may require. Recipients of this report should independently evaluate particular information and opinions and seek the advice of their own professional and financial advisers in relation to any investment, financial, legal, business, tax, accounting or regulatory issues before making any investment or entering into any transaction in relation to information and opinions discussed herein.

National Bank of Greece has prepared and published this report wholly independently of any of its affiliates and thus any commitments, views, outlook, ratings or target prices expressed in these reports may differ substantially from any similar reports issued by affiliates which may be based upon different sources and methodologies.

This report is not directed to, or intended for distribution to use or use by, any person or entity that is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to any law, regulation or rule.

This report is protected under intellectual property laws and may not be altered, reproduced or redistributed, or passed on directly or indirectly, to any other party, in whole or in part, without the prior written consent of National Bank of Greece.

#### **ANALYST CERTIFICATION:**

The research analyst denoted by an "AC" on page 1 holds the certificate (type  $\Delta$ ) of the Hellenic Capital Market Commission/Bank of Greece which allows her/him to conduct market analysis and reporting and hereby certifies that all of the views expressed in this report accurately reflect his or her personal views solely, about any and all of the subject issues. Further, each of these individuals also certifies that no part of any of the report analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed in this report. Also, all opinions and estimates are subject to change without notice and there is no obligation for update.
