ESMA Alternative Performance Measures (APMs), definition of financial data and ratios used

The 2Q23 Financial Results Presentation contains financial information and measures as derived from the Group and Bank financial statements for the period ended 30 June 2023 and for the year ended 31 December 2022, which have been prepared in accordance with International Accounting Standard 34 “Interim Financial Reporting” and International Financial Reporting Standards (“IFRS”), as endorsed by the EU respectively. Additionally, it contains financial data which is compiled as a normal part of our financial reporting and management information systems. For instance, financial items are categorized as foreign or domestic on the basis of the jurisdiction of organization of the individual Group entity whose separate financial statements record such items.

Moreover, it contains references to certain measures which are not defined under IFRS, including “pre-provision income” (“PPI”), “net interest margin” (NIM) and others, as defined below. These are non-IFRS financial measures. A non-IFRS financial measure is one that measures historical or future financial performance, financial position or cash flows but which excludes or includes amounts that would not be so adjusted in the most comparable IFRS measure. The Group believes that the non-IFRS financial measures it presents allow a more meaningful analysis of the Group’s financial condition and results of operations. However, the non-IFRS financial measures presented are not a substitute for IFRS measures.
