Global Markets Roundup

National Bank of Greece | Economic Research Division | April 6, 2021

The S&P500 crossed the 4000 threshold due to ample fiscal and monetary policy support

- The USD edged higher in Q1:2021, due to solid US growth and increasing US Government bond intermediate and long-term interest rates. The DXY trade-weighted index appreciated by 4%, while the EUR/USD declined below the \$1.18 threshold for the first time in 5 months.
- Interest rate differentials have supported the USD. Indeed, 10-year nominal EUR vs USD interest rate swap spreads, have widened by 57 bps to -177 bps (real: -56 bps to -35 bps), year-to-date (see graph page 3).
- The beta of increasing US Treasury yields on German Bund yields, is expected to remain restrained, following ECB commitment to prevent an increase of EUR interest rates solely due to global spillover effects.
- A highly uncertain near-term euro area economic growth outlook, warrants preserving favorable financing conditions. Indeed, vaccination programs have been considerably slower in euro area (Germany: 5.2%, France: 4.5% and Italy: 5.7% of the population have been fully inoculated) resulting, *inter alia*, in higher infection rates and renewed containment measures early in Q2:2021.
- On the other hand, the prospect of a full reopening of the US economy is coming closer, as significant progress in the rollout of vaccinations is taking place. As of April 4th, 19% of the US population had been fully inoculated and 32% had received at least one dose.
- Hard economic data differentials remain in favor of the US, as well. Nonfarm payrolls increased by 916k in March surpassing consensus estimates of 620k. Details were also solid, with the unemployment rate declining by 0.2% to 6% even as the labor force participation rate ticked up to 61.5% (see Economics).
- Regarding soft economic data, the US ISM manufacturing index surged to 64.7 in April -- its highest level since 1983. Nevertheless, euro area PMIs business surveys have improved as well, leaving room for improvement in the euro area outlook in coming weeks, as vaccine supply is set to increase in Q2:2021.
- US equities have been able to absorb the upward adjustment in Treasury yields, as it reflected improving expectations vis-à-vis US growth and inflation. Moreover, the Federal Reserve's "resolute patience" forward guidance, suggests that policy is expected to look past transitory inflation increases in Q2:2021, *inter alia*, due to base effects (oil and gas prices).
- The S&P500 crossed the 4000 threshold for the first time on April 1st, ending Q1:2021 up by 6%, also supported by the White House infrastructure proposal of around \$1.7 trillion in capital investment and R&D over ten years (\$0.5 trillion in various benefits including Medicaid). Regarding investing styles and sectors, Value (10%) beat Growth (2%) and Small Caps (12%) beat Large Caps (6%), while Energy (29%) and Financial (15%) stocks, overperformed.

Sharp US job creation in March, above expectations

- US non-farm payrolls rose sharply in March. Specifically, nonfarm payrolls increased by 916k, compared with +468k in February and well above consensus estimates for 620k. Job creation in March benefitted from easing pandemic-related restrictions. Indeed, sector-wise, leisure and hospitality led the rise, with payrolls up by 280k (+176k in food services and drinking places, +64k in arts, entertainment & recreation and +40k in accommodation). In addition, the resumption of in-person learning and activities related to schools which were partially restrained due to the pandemic, resulted in employment increasing substantially in the broad education industry (+76k at the local government level, +50k at the State level and +64k in private education). Finally, sharp gains were recorded in construction (+110k), mainly reflecting a payback from the weak reading in February (-56k), which was distorted to the downside from adverse weather conditions.
- Overall, total household employment (including the self-employed and agricultural workers) was up by 609k in March. As a result, the unemployment rate fell by 0.2 pps to 6.0%. According to the Bureau of Labor Statistics (BLS), some workers continued to be misclassified as employed but absent from work due to "other reasons", while they should have been classified as unemployed on temporary layoff. Without that accounting error, the unemployment rate would have been somewhat higher, with the BLS estimating the upper bound of that misclassification effect at 0.4%.
- Recall that both the jump in the official unemployment rate during the initial lockdowns period in 2020 (at 14.8% in April from 3.5% in February, which was the lowest since December 1969) and the sharp fall in subsequent months, was mostly due to people entering a state of temporary layoff (i.e persons that have been given a date to return to work by their employer or expect to be recalled to their job within 6 months) and subsequently returning to work, respectively. Note that in the US, workers on temporary furlough are counted as unemployed, a different norm compared with Europe. As a result, in the current exceptional circumstances, caution is warranted in making direct comparisons between official unemployment rate figures in the US and in European countries (in the US, the number of unemployed persons excluding those on temporary layoff, as % of the labor force, was 4.7% in March). Finally, a broader measure of labor market slack, the U-6 unemployment rate (which includes the unemployed, part-time workers for economic reasons, and those workers marginally attached to the labor force), declined by 0.4 pps to 10.7% in March.

US business confidence strengthened further in March

• US business surveys posted a sharp improvement in March, with PMIs reaching multi-year highs. Specifically, the ISM manufacturing PMI increased by 3.9 pts to 64.7 (above the expansion/contraction threshold of 50 for a 10th consecutive month), the highest since December 1983 and beating consensus estimates for 61.5. In addition, the more forward looking component of new orders, continued to overperform considerably (68.0). At the same time, the ISM services (formerly known as nonmanufacturing) PMI came out at 63.7 in March, a record (since 1997) high, from 55.3 in the previous month, well above consensus estimates for 58.5. Recall that supply is struggling to catch up with

rising demand, with respondents in both surveys continuing to highlight disruptions linked to the supply chain (mainly shortages of critical basic materials) and distribution. The consequent, stronger suppliers' pricing power, combined with higher international prices of commodities, result in rising input costs, a major source of concern for respondents.

Euro area core inflation undershot expectations in March

- According to the "flash" estimate, headline inflation accelerated by 0.4 pps to +1.3% yoy in March, largely as expected, due to the recovery of energy prices, with the annual growth at +4.3% yoy in March, from -1.7% yoy in February. The respective index for food, alcohol & tobacco came out at +1.1% yoy, versus +1.3% yoy in February. More importantly, core inflation (which excludes the effects of energy and food components) decelerated by 0.2 pps to 0.9% yoy, versus consensus for a broadly unchanged reading, with depressed consumer demand continuing to weigh.
- Looking forward, the outlook for inflation is uncertain and closely related to the timing and the path of the post-pandemic economic recovery (and consequently of consumer demand). In any case, recall that elevated volatility is expected in the course of 2021 and 2022, due to base effects linked to energy prices, albeit also related in part to temporary technical factors (i) changes in the CPI basket weights reflecting changed consumption patterns in the context of the pandemic and (ii) impacts from pandemic-related policies regarding indirect taxes. Further distortions are possible in the short term (especially after activities re-open in travel, tourism, food services and drinking places), due to base effects linked to methodological issues. In the event, recall that during the initial lockdown period a year ago, data collection in categories such as airfares, package holidays, bars & restaurants as well as in accommodation industries, was particularly restrained by lockdowns.

Japan: Business sentiment improved substantially

The Bank of Japan's quarterly Tankan survey that assesses business conditions, revealed a significant improvement of confidence compared with three months ago, above expectations. Specifically, the headline business conditions index for large manufacturers was up by 15 pts to +5 in March, versus consensus estimates for -1. At the same time, the index for large non-manufacturers came out at -1 in March, compared with -5 in December, overshooting expectations for -4. Regarding respondents' outlook for activity for three months ahead, the March outcomes were largely in line with expectations, with the respective index for manufacturers up by 12 pts to +4 and rising by 5 pts to -1 among non-manufacturers. Moreover, companies' fixed investment plans (including all surveyed large enterprises | excluding software and R&D investment) for the fiscal year 2021 (i.e. April 2021-March 2022) entered on a positive note, at +3.0% yoy, above consensus for -1.4% yoy (software: +5.7% yoy | R&D: +1.6% yoy).

Equities

 Global equity markets rose in the past week due to: i) the President Biden's proposal for a new fiscal stimulus bill of \$2.25 tn, which will focus on infrastructure and ii) better-than-expected economic data. Overall, the MSCI ACWI ended the week up by 1.1% (+5.4% ytd), with Emerging Markets (+2.4% wow | +3.6% ytd) overperforming their Developed Markets peers (+1% wow | +5.6% ytd). In the US, the S&P500 rose by 1.1% wow, recording an all-time high of 4020, while equity implied volatility subsided, with the VIX index declining to 17% (vs. 20% on average during the previous week), its lowest level since February 2020. The stronger-than-expected data, with ISM Manufacturing Index posting its highest level since December 1983, contributed to the upside. Yearto-date, the index has increased by 7%, supported also by the upward revision of the S&P 500 EPS growth estimate for Q1:2021, to 23.8% from 15.8% during the same period. On Monday, the index rose by 1.4%, following the positive data from the ISM Services index. Sector-wise, Autos (+5.3% wow | +4.3% on Monday) overperformed, as \$174 bn of the new fiscal package are expected to be invested in the US EV market, while at the same time consumers will be given incentives to buy EVs made in the country. Tesla posted significant gains (+7% wow | 4.4% on Monday), following the company's record high deliveries in Q1:21 (184k vs estimate for 168k). Communication Services rose by 3.4% wow, with Netflix (+6.2%), Facebook (+5.5%) and Google (+5.2%) recording significant gains. On the other side of the Atlantic, the EuroStoxx index increased by 1.8% wow, supported by the better-than-expected data for Economic Confidence and Business Climate Indicators.

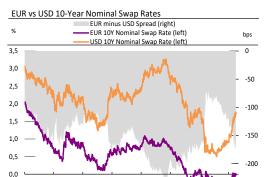

Fixed Income

• Government bond yields increased in major advanced economies in the past week. Specifically, the US Treasury 10-year yield, ended the week up by 5 bps wow to 1.72%, recording intra-week its highest level since January 2020 (1.74%). The significantly-above-expectations labor market data on Friday contributed to the upside. During the first quarter of 2021, the yield has risen by 82 bps, posting its largest quarterly increase since the fourth quarter of 2016 (+88 bps). Similarly, in the UK, the 10-year yield rose by 5 bps wow to 0.80%, supported by the easing of the restrictive measures in the country. In Germany, the 10-year yield increased by 3 bps to -0.31%. The upward trend reversed on Wednesday, following weaker-than-expected data for core inflation and President Lagarde's comments that the end of the Pandemic Emergency Purchase Programme (PEPP) in 2022 is "not set in stone". Periphery bond yields, in the 10-year tenor, largely tracked their core markets peers, increasing across the board with the exception of Greece (Italy: +2 bps to 0.65%, Spain: +2 bps to 0.30%, Portugal: +4 bps to 0.25%, Greece: -4 bps to 0.82%).

FX and Commodities

• The US dollar appreciated in the past week due to the strong inoculation pace in the country as well as the new large fiscal stimulus proposal. Specifically, the USD ended the week up by 0.2% against a basket of tradeweighted currencies (DXY), posting its highest level since November 2020 and by 1% against the Japanese yen to ¥110,6, a 12-month high. Finally, in commodities, oil prices ended the week slightly up, despite the decision of OPEC+ members to gradually increase their production in the next three months (by 350k barrels per day (bpd) in May, by 350k bpd in June and by 441k bpd in July). Furthermore, Saudi Arabia will gradually reduce its voluntary cut of 1 million bpd announced in January, by 250k bpd in May, by 350k bpd in June and by 400k bpd in July. However, investors are expecting that oil demand will increase in the third quarter of the year in the US and in Asia, a development that could offset the increased supply. Overall, the WTI increased by 0.8% to \$61.5/barrel (+27% ytd). On Monday, the trend reversed (WTI: -4.6%), ahead of the start of US-Iran talks on Tuesday.

Economic Calendar

In the US, the minutes of the latest Fed meeting are released on Wednesday. On Thursday, attention turns to the weekly initial and continuing jobless claims for a more updated view of labor market conditions.

In the Euro area, the unemployment rate for February is released and is expected stable at 8.1%. On Monday, attention turns to retail sales for February. Note that in January, retail sales were down by 5.9% mom.

In Germany, industrial production for February is released on Friday (consensus for +1.5% mom vs -2.5% mom and -2.7% yoy vs -3.9% yoy in the previous month).

DISCLOSURES:

This report has been produced by the Economic Research Division of the National Bank of Greece, which is regulated by the Bank of Greece, and is provided solely as a sheer reference for the information of experienced and sophisticated investors who are expected and considered to be fully able to make their own investment decisions without reliance on its contents, i.e. only after effecting their own independent enquiry from sources of the investors' sole choice. The information contained in this report does not constitute the provision of investment advice and under no circumstances is it to be used or considered as an offer or an invitation to buy or sell or a solicitation of an offer or invitation to buy or sell or enter into any agreement with respect to any security, product, service or investment. No information or opinion contained in this report shall constitute any representation or warranty as to future performance of any financial instrument, credit, currency rate or other market or economic measure. Past performance is not necessarily a reliable guide to future performance. National Bank of Greece and/or its affiliates shall not be liable in any matter whatsoever for any consequences (including but not limited to any direct, indirect or consequential losses, loss of profits and damages) of any reliance on or usage of this report and accepts no legal responsibility to any investor who directly or indirectly receives this report. The final investment decision must be made by the investor and the responsibility for the investment must be taken by the investor.

Any data provided in this report has been obtained from sources believed to be reliable but has not been independently verified. Because of the possibility of error on the part of such sources, National Bank of Greece does not guarantee the accuracy, timeliness or usefulness of any information. Information and opinions contained in this report are subject to change without notice and there is no obligation to update the information and opinions contained in this report. The National Bank of Greece and its affiliate companies, its representatives, its managers and/or its personnel or other persons related to it, accept no responsibility, or liability as to the accuracy, or completeness of the information contained in this report, or for any loss in general arising from any use of this report including investment decisions based on this report. This report does not constitute investment research or a research recommendation and as such it has not been prepared in accordance with legal requirements designed to promote investment research independence. This report does not purport to contain all the information that a prospective investor may require. Recipients of this report should independently evaluate particular information and opinions and seek the advice of their own professional and financial advisers in relation to any investment, financial, legal, business, tax, accounting or regulatory issues before making any investment or entering into any transaction in relation to information and opinions discussed herein.

National Bank of Greece has prepared and published this report wholly independently of any of its affiliates and thus any commitments, views, outlook, ratings or target prices expressed in these reports may differ substantially from any similar reports issued by affiliates which may be based upon different sources and methodologies.

This report is not directed to, or intended for distribution to use or use by, any person or entity that is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to any law, regulation or rule.

This report is protected under intellectual property laws and may not be altered, reproduced or redistributed, or passed on directly or indirectly, to any other party, in whole or in part, without the prior written consent of National Bank of Greece.

ANALYST CERTIFICATION:

The research analyst denoted by an "AC" on page 1 holds the certificate (type Δ) of the Hellenic Capital Market Commission/Bank of Greece which allows her/him to conduct market analysis and reporting and hereby certifies that all of the views expressed in this report accurately reflect his or her personal views solely, about any and all of the subject issues. Further, each of these individuals also certifies that no part of any of the report analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed in this report. Also, all opinions and estimates are subject to change without notice and there is no obligation for update.
