

## US political uncertainty remains elevated ahead of the Presidential elections on November 3<sup>rd</sup>, albeit US equity markets interrupted four consecutive weekly declines

- Global equity markets consolidated in the past week, following a mini correction since early-September. Overall in Q3, the MSCI ACWI index posted a stellar performance, up by 7.7%, albeit (as of October 2<sup>nd</sup>) being 5% off its peak on September 2<sup>nd</sup>. Region-wise, markets' performance was uneven in Q3, with the EuroStoxx largely flat overall (+0.3% | -12.4% ytd), whereas the S&P500 gained 8.5% (+4.1% ytd). The US equity market found support from the heavyweight Information Technology (IT) sector (28% of the headline index's market capitalization) which gained 12% in Q3 (+27.5% ytd). Having said that, IT has demonstrated a considerable correction from its peak on September 2<sup>nd</sup> (-9.5% as of October 2<sup>nd</sup>) when valuations appeared to be running disconcertingly ahead of fundamentals. In the event, the 12-month forward P/E ratio (share prices divided by consensus estimates for 12-month forward earnings per share) stood at 28.7x for the S&P500 IT sector in early September, versus a 15-year average of 15.6x (currently at 25.6x).
- On the positive side of the ledger, the latest economic data support the view that the US economic recovery post-lockdowns, continues. The slack in the labor market diminished further (see Economics), while September's PMIs from the Institute for Supply Management (ISM) remained well above the expansion/contraction threshold of 50 (manufacturing: -0.6 pts to 55.4 | services: +0.9 pts to 57.8). In China, PMIs suggest continued strong expansion of business activity in September (see Economics). Finally, in the euro area, the Economic Sentiment index from the European Commission (a composite indicator based on input from business surveys in the sectors of manufacturing, services, retail trade and construction as well the consumer confidence survey) rose by 3.6 pts to 91.1 in September, alleviating the concerns induced by the PMI surveys (composite: -1.8 pts to 50.1) that the recovery may have stalled in the month. In addition, retail sales surprised positively in August, up by 4.4% mom (+4% yoy) versus consensus estimates for +2.4% mom.
- A key risk remains the course of the pandemic and the respective medical developments as well as the behavioral responses from economic agents, especially the extent to which a possible deterioration of epidemiological data, will lead to a reduction of mobility, either mandatory or voluntary. Another major risk factor is political uncertainty in the US ahead of the Presidential elections on November 3<sup>rd</sup> and the elections for the US Congress (Senate-R, House-D), with the US President contracting Covid-19, adding to an already challenging political landscape. In the event, note that the vote count is expected to be relatively protracted (as mail-in ballots will represent a high percentage of votes for coronavirus-related safety reasons) and there is a considerable probability that the outcome will be legally contested. In that context, the political dust may not settle earlier than early-January 2021.
- That development also raises the concerns regarding the timeliness of the prospective new fiscal stimulus. In the event, last minute efforts are being made in the US legislature for a bipartisan agreement to be reached before the elections. Reportedly, the gap in the size of proposed packages has slightly lessened, albeit remaining vast. Indeed, Democrats' current standpoint is \$2.2 tn (10.4% of US GDP | from \$3.4 tn initially), whereas the Republicans may support a package totaling \$1.62 tn (7.7% of GDP | standpoint of \$1.3 tn – \$1.5 tn a week ago and initial proposal of \$1.0 tn).

Charts of the week

**US unemployment rate remains on a downward trend as people on temporary layoff gradually return to work, albeit permanent job losers continue to increase**

- US employment increased sharply for a 5<sup>th</sup> consecutive month post-lockdowns, in view of the continued resumption of economic activity, especially in the sectors most severely weighed by the pandemic and the respective measures to stem its spread.** Indeed, nonfarm payrolls increased by 661k (+1489k in August), with c. half of the gains (318k) occurring in leisure & hospitality. The latest reading was somewhat below consensus expectations for 850k, albeit significant positive net revisions for the previous two months took place (+145k). The unemployment rate declined by 0.5 pps to 7.9% in September, below consensus estimates for 8.2%, albeit the latest decrease was also due to a lower labor force participation rate (-0.3 pps to 61.4%). Overall, the fall in the unemployment rate has been sharp after reaching 14.7% in April 2020, which was the worst reading since the Great Depression (c. 25% in 1933), albeit remaining well above the pre-pandemic levels (3.5% in February, the lowest since December 1969). Note that according to the Bureau of Labor Statistics (BLS), some workers continued to be misclassified as employed but absent from work due to “other reasons”, while they should have been classified as unemployed on temporary layoff. Without that accounting error, the unemployment rate would have been somewhat higher, with the BLS estimating the upper bound of that misclassification effect at 0.4%. Finally, a broader measure of labor market slack, the U-6 unemployment rate (which includes the unemployed, part-time workers for economic reasons, and those workers marginally attached to the labor force), posted a more profound decline, to 12.8% in September from 14.2% in August, well below consensus for 15.4%, mostly due to a significant reduction in the number of people whose working hours had been cut due to slack work or business conditions. In the event, people working part-time for economic reasons (often referred to as involuntary part-time workers as they would have preferred full-time employment) declined by 1.3mn.

- Having said that, note that employment gains in recent months continue to be mostly due to a portion of the people on temporary layoff** (i.e. persons that have been given a date to return to work by their employer or expect to be recalled to their job within 6 months) **returning to work.** In the event, the number of people on temporary layoff decreased by 1.5mn to 4.6mn (a still elevated figure, suggesting scope for a further reduction of the unemployment rate as more of them gradually return to work in coming months). Recall that in the US, workers on temporary furlough are counted as unemployed, a different norm compared with Europe. As a result, in the current exceptional circumstances, caution is warranted in making direct comparisons between official unemployment rate figures in the US and in European countries (in the US, the number of unemployed persons excluding those on temporary layoff, as % of the labor force, was 5.0% in September from 4.6% in August and a trough of 3.0% in February 2020). **On a negative note, permanent job losers continued to increase considerably in September, by 345k to 3.8mn, having risen by 2.5mn cumulatively since the start of the pandemic.** That development supports the view that despite the continuing fading of the negative repercussions from the pandemic, a full recovery of labor market conditions to pre-pandemic norms will likely be a long and protracted procedure.

**Euro area CPI inflation decelerated further in September**

- Headline inflation went deeper into negative territory in September and the annual growth of core CPI came out at a record low.** Specifically, headline CPI came out at -0.3% yoy from -0.2% yoy in August, the lowest outcome since April 2016 (consensus for an unchanged outcome). More importantly, core inflation (which excludes the effects of energy and food components) decelerated meaningfully for a 2<sup>nd</sup> consecutive month, to a record (since 1997) low of +0.2% yoy in September compared with +0.4% yoy in August and +1.2% yoy in July, undershooting by a wide margin consensus estimates for +0.5% yoy. Looking forward, the outlook for inflation is highly uncertain and closely related, *inter alia*, to the path of economic recovery (and consequently of consumer demand). In the event, the resiliency of labor market conditions remains a key issue in minimizing the negative impact from the pandemic on the economic tissue and consequently for safeguarding the economic recovery prospects. Recall **that in August, the unemployment rate was 8.1% compared with 8.0% in July and a record (since 1998) low of 7.2% in March.**

**Japan: Business sentiment improved in September, albeit remaining subdued**

- Bank of Japan’s quarterly Tankan survey that assesses business conditions improved by less than expected in September.** Specifically, the index for large manufacturers was up by 7 pts to -27 in September versus consensus for -23. In a similar note, the index for large non-manufacturers rose by 5 pts to -12, also undershooting expectations for -9. Regarding respondents’ outlook for activity for three months ahead, the respective index for manufacturers increased meaningfully, by 10 pts to -17, in line with consensus estimates, with the improvement concentrated in motor vehicles, iron & steel and production machinery sub-sectors. Among non-manufacturers, the outlook index rose more modestly, by 3 pts to -11 (consensus: -9), with an improvement in personal services industries being partly offset by a deterioration in retailing and construction firms. Finally, companies’ fixed investment plans (including all surveyed large enterprises | excluding software and R&D investment) for FY:2020 (i.e. April 2020-March 2021) was +1.4% yoy, largely in line with consensus estimates (software: +6.7% yoy | R&D: -0.7% yoy).

**Chinese PMIs point to continued recovery for business activity**

- Business surveys in September modestly overshot expectations.** Specifically, the Caixin/Markit manufacturing PMI was broadly stable at 53.0, largely in line with consensus estimates. At the same time, the “official” manufacturing PMI, i.e. the one from the National Bureau of Statistics (NBS) of China (which covers a broader range of industries) was modestly up, by 0.5 pts to 51.5, versus expectations for 51.2. Moreover, the relatively more forward looking indicator of new orders over-performed, +0.8 pts to 52.8 in September. Notably, the sub-index of new export orders, despite continuing to underperform, continued to improve considerably, up by 1.7 pts to 50.8, above the expansion/contraction threshold of 50.0 for the first time in 2020. That development supports the view for a stabilization in global activity (and consequently for China’s external demand). Finally, the official non-manufacturing PMI (which covers the services and construction sectors) rose by 0.7 pts to 55.9, well above consensus expectations for 52.1.

## Equities

- Global equities rose in the past week, following four weeks with losses, at least for S&P 500.** Overall, the MSCI ACWI ended the week up by 1.6% (-0.2% ytd), with both Developed (+1.5% wow | +0.2% ytd) and Emerging Markets (+2.1% wow | -3% ytd) recording gains. The S&P500 rose by 1.5% wow (+3.6% ytd), recording its first week with gains since late-August, as investors tentatively turned to risk-on mode, with stocks' valuations remaining close to 20-year highs. Specifically, the 12-month forward P/E ratio stands at 21.6x, with the very low yields of government and corporate high grade bonds, fueling inflows towards equities. Sector wise, Banks (+4.6% wow) led the increase as investors found buying opportunities after the index recorded a 4-month low in the previous week and on the back of news that China's Ping An Insurance Group Co., HSBC's biggest shareholder, bought 10.8 mn shares to increase its stake to 8%. On the contrary, Energy declined by 2.9% wow, being the only sector that posted losses in the past week, on account of lower oil prices (see below). However, on Friday, the trend reversed, with the index ending the day 1% lower, as news that President Trump has tested positive for Covid-19 complicate further a tense and uncertain pre-election period. On Monday, the concerns eased, due to news that the President could be released from the hospital very soon, with the S&P 500 moving higher. On the other side of the Atlantic, the Eurostoxx ended the week up by 2.1% (-12.2% ytd), although new restrictive measures have been imposed in the UK, France and Spain to constrain the spread of the coronavirus.

## Fixed Income

- Government bond yields were mixed in major advanced economies in the past week.** Overall, the US Treasury 10-year yield ended the week up by 4 bps at 0.69%, with the spread between the 10-year and 2-year Treasury yields at 54 bps (from 0 bps in September 2019). Overall, US Treasury 10-year yields (-125 bps ytd) have stabilized recently, as the economic activity has recovered in the 3<sup>rd</sup> quarter, bouncing back from the short-lived recession (February-April). Moreover, the short-term rates are close to 0% and they are expected to remain at these levels at least until 2023, under the assumption that the inflation rate (and its dynamic) will remain in the range of 2%-2.5%. On the other side of the Atlantic, in the UK, the 10-year yield rose by 6 bps to 0.27%, after the EU launched legal actions against the country on Thursday, as a deadline to remove controversial provisions from the "Internal Market Bill" had passed. In Germany, the 10-year Bund yield fell by 1 bp to -0.53%, recording a 7-week low, following the weaker-than-expected inflation data. Periphery bond yield spreads over the Bund in the 10-year tenor fell across the board (Italy: -9 bps to 130 bps, Spain: -1 bp to 75 bps, Portugal: -3 bps to 74 bps, Greece: -3 bps to 151 bps) with the Italian 10-year bond yield declining by 10 bps to a new record low of 0.77%.
- Corporate bond spreads narrowed in the past week.** Specifically, US high yield spreads fell by 26 bps to 538 bps, while their euro area counterparts were down by 18 bps to 466 bps. In the Investment Grade spectrum, US spreads were down by 3 bps to 143 bps and Euro area spreads declined by 3 bps to 116 bps.

## FX and Commodities

- In foreign exchange markets, the US Dollar declined in the past week, due to reduced "safe haven" demand.** Specifically, the US Dollar fell by 0.8% wow against the euro to \$1.171 and by 0.3% against the Japanese Yen to ¥105.36. Pandemic developments, news related with President Trump's health and the US election in early November are the basic factors that will affect the trend for the EUR/USD rate in the following weeks. On the contrary, the British Pound rose in the past week by 1.8% against the US Dollar to \$1.293 and by 1% against the euro at €0.906. Finally, **in commodities, oil prices declined in the past week due to the continuing concerns about future oil demand.** Moreover, the higher output by Libya, the increased exports from Iraq, Kuwait and Saudi Arabia as well as news that only 6 out of 13 OPEC+ members have submitted plans of how they will apply extra cuts after missing the agreed quotas, also contributed to the downside. Overall, Brent decreased by 6.3% to \$39.3/barrel (-41% ytd), and the WTI fell by 8% to \$37.1/barrel (-39% ytd).

Graph 1.

Graph 2.

Graph 3.

**Quote of the week:** "In the current environment of lower inflation, the concerns we face are different and this needs to be reflected in our inflation aim ... The wider discussion today ... is whether central banks should commit to explicitly make up for inflation misses when they have spent quite some time below their inflation goals.", **ECB President, Christine Lagarde, September 30<sup>th</sup> 2020.**

**DISCLOSURES:**

This report has been produced by the Economic Research Division of the National Bank of Greece, which is regulated by the Bank of Greece, and is provided solely as a sheer reference for the information of experienced and sophisticated investors who are expected and considered to be fully able to make their own investment decisions without reliance on its contents, i.e. only after effecting their own independent enquiry from sources of the investors' sole choice. The information contained in this report does not constitute the provision of investment advice and under no circumstances is it to be used or considered as an offer or an invitation to buy or sell or a solicitation of an offer or invitation to buy or sell or enter into any agreement with respect to any security, product, service or investment. No information or opinion contained in this report shall constitute any representation or warranty as to future performance of any financial instrument, credit, currency rate or other market or economic measure. Past performance is not necessarily a reliable guide to future performance. National Bank of Greece and/or its affiliates shall not be liable in any matter whatsoever for any consequences (including but not limited to any direct, indirect or consequential losses, loss of profits and damages) of any reliance on or usage of this report and accepts no legal responsibility to any investor who directly or indirectly receives this report. The final investment decision must be made by the investor and the responsibility for the investment must be taken by the investor.

Any data provided in this report has been obtained from sources believed to be reliable but has not been independently verified. Because of the possibility of error on the part of such sources, National Bank of Greece does not guarantee the accuracy, timeliness or usefulness of any information. Information and opinions contained in this report are subject to change without notice and there is no obligation to update the information and opinions contained in this report. The National Bank of Greece and its affiliate companies, its representatives, its managers and/or its personnel or other persons related to it, accept no responsibility, or liability as to the accuracy, or completeness of the information contained in this report, or for any loss in general arising from any use of this report including investment decisions based on this report. This report does not constitute investment research or a research recommendation and as such it has not been prepared in accordance with legal requirements designed to promote investment research independence. This report does not purport to contain all the information that a prospective investor may require. Recipients of this report should independently evaluate particular information and opinions and seek the advice of their own professional and financial advisers in relation to any investment, financial, legal, business, tax, accounting or regulatory issues before making any investment or entering into any transaction in relation to information and opinions discussed herein.

National Bank of Greece has prepared and published this report wholly independently of any of its affiliates and thus any commitments, views, outlook, ratings or target prices expressed in these reports may differ substantially from any similar reports issued by affiliates which may be based upon different sources and methodologies.

This report is not directed to, or intended for distribution to use or use by, any person or entity that is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to any law, regulation or rule.

This report is protected under intellectual property laws and may not be altered, reproduced or redistributed, or passed on directly or indirectly, to any other party, in whole or in part, without the prior written consent of National Bank of Greece.

**ANALYST CERTIFICATION:**

The research analyst denoted by an "AC" on page 1 holds the certificate (type Δ) of the Hellenic Capital Market Commission/Bank of Greece which allows her/him to conduct market analysis and reporting and hereby certifies that all of the views expressed in this report accurately reflect his or her personal views solely, about any and all of the subject issues. Further, each of these individuals also certifies that no part of any of the report analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed in this report. Also, all opinions and estimates are subject to change without notice and there is no obligation for update.
