

## Global equity markets tumble, as COVID-19 spreads further afield

- The spread of COVID-19 to Italy (Iran, S. Korea) generated multi-sigma losses for equity indices and speculative grade corporate bonds on both sides of the Atlantic, while US Treasuries and Gold prices rallied. The S&P500 declined by 3.3% and euro area equities tumbled by -4% (FTSE/MIB:-6%), with US 10-Year yields declining by 10 bps to an all-time low of 1.30%. Market reaction prices in significant uncertainty about the further evolution of COVID-19 and its negative impact on global trade, consumer spending and economic activity in general.
- The Federal Open Market Committee (FOMC) minutes from the January 28-29 meeting confirmed the Fed's intention to maintain monetary policy steady, at least in the short-term, with the federal funds rate in the range of 1.5% - 1.75%. Indeed, the current policy stance was deemed "likely to remain appropriate for a time", barring a material reassessment of its economic outlook (e.g. if the disruptions stemming from the COVID-19 hit the US economy hard).
- FOMC members believe that downside risks for economic activity have recently decreased, highlighting the easing of trade tensions following the US-China "Phase 1" agreement and the ratification of the US-Mexico-Canada trade agreement. However, they noted that the consequences of COVID-19 on the global economy will be closely monitored. Note that the latest FOMC projections (December) point to GDP growth of 2.0% yoy in Q4:20 (consensus: 1.8% yoy).
- FOMC members expect inflation to move closer to the target of 2% in coming months. Indeed, the annual pace of growth for the Personal Consumption Expenditure (PCE) index (the Fed's preferred measure for gauging inflation) was 1.6% yoy in December. According to the Federal Reserve Bank of Cleveland's Inflation Nowcasting model, it is expected at 1.8% yoy in both January and February.
- The FOMC minutes suggest that the reserve maintenance purchases of US Treasury Bills will likely start to be tapered after the April tax season. Recall that these purchases, since their adoption in mid-October to ensure ample reserve balances and alleviate repo-market funding pressures, have proceeded with a monthly pace of c. \$60 bn (cumulative net purchases of \$260 bn as of February 19<sup>th</sup>). Markets hold a significantly more benign stance regarding the prospects for monetary policy, fully pricing-in one cut of 25 bps in H1:20 and one more by end-2020.
- On the other side of the Atlantic, the minutes of the ECB meeting of January 23<sup>rd</sup> supported the view that the ECB will remain on hold in the foreseeable future (Deposit Facility Rate at -0.5% and net asset purchases at a monthly pace of €20 bn). Furthermore, the minutes did not contain any details regarding the issues that the strategy review (set to conclude by year-end) will cover.
- On the economic outlook, ECB officials highlighted the partial reduction of international trade-related uncertainty and survey-based signs of stabilization for growth dynamics. Nevertheless, it should be noted that the meeting preceded the developments in recent days regarding the spread of COVID-19 (in fact, this issued was not referred to in the minutes). Recall that the latest business surveys (PMI) are consistent with the view for a modest improvement in the momentum for economic activity, albeit with signs of supply chain disruptions related to COVID-19 starting to appear (see Economics).

US Federal Funds Rate & Projections by FOMC and Markets (Futures)

### The outlook for the US housing market remains positive

- **The latest housing market data suggest that activity in the sector slowed only slightly (and by less than expected) entering Q1:20, following a sharp acceleration in December and, overall, continue to point to an upward trajectory for residential investment.** Specifically, housing starts declined by 3.6% mom (+21.4% yoy) in January, versus +17.7% mom in December (+42.4% yoy), to a still strong 1567k (monthly average of 1449k in Q4:19) and well above consensus estimates for 1428k. Existing home sales fell by 1.3% mom (+9.6% yoy) in January, albeit following a robust +3.9% mom in December (+10.4% yoy), to a still solid 5.46 mn (consensus for 5.44 mn). It should also be noted that house price growth has accelerated meaningfully in recent months. Indeed, the annual growth of the median existing home price stood at +6.8% yoy in January compared with a trough of +3.3% yoy in December 2018, a pace well above the respective trend for nominal personal income growth (+3.6% yoy in January). Such divergence, if sustained, could cause housing affordability issues in the longer term, thus ending the ongoing housing market recovery. Finally, the National Association of Home Builders (NAHB) survey index – that captures homebuilders' confidence for new home sales – declined for a 2<sup>nd</sup> consecutive month in February, to a still high 74 compared with 75 in January and 76 in December, which was the highest reading since June 1999. Respondents continue to highlight firm labor market conditions and lower mortgage rates as the main supporting factors for the housing market. Regarding the latter, the 30Yr fixed mortgage rate currently stands at 3.77%, versus an 8½-year high of 5.17% in November 2018. On the other hand, accelerating price growth was cited as source of concern. Overall, the latest data leave room for optimism that residential investment will continue to increase for a 3<sup>rd</sup> consecutive quarter in Q1:20, after rising by 5.2% qoq saar on average in Q3:19 & Q4:19.

### Euro area PMIs were higher than expected in February, albeit with early signs that negative repercussions from the COVID-19 outbreak may lie ahead

- **Euro area PMIs suggest continued resilience in the services sectors, while sustaining the view that the manufacturing sector, despite remaining in recession, moved closer to stabilization recently.** Overall, the composite index was up slightly, by 0.3 pts to 51.6, versus consensus estimates for 51.0. The services PMI rose by 0.3 pts to 52.8, remaining well above the expansion/contraction threshold of 50.0. Moreover, manufacturing PMI improved to 49.1, compared with 47.9 in January (and 46.3 in December), the highest since February 2019, albeit remaining in contractionary territory for a 13<sup>th</sup> consecutive month. It should be noted that the latest improvement in the headline figure was partly due to a sharp lengthening in the supplier delivery times. Usually, such a difficulty for suppliers to meet customer needs comes on the back of a substantial strengthening in the demand (hence the lengthening of delivery times contributes positively to the headline index). Nevertheless, in the latest survey, respondents' comments suggest that the aforementioned lengthening was mainly due to supply chain disruptions stemming from the COVID-19 outbreak, a development that, if sustained, does not bode well for production going forward. Note also that, in both sectors, private corporations' optimism eased modestly, with respondents' expectations for one year ahead output decreasing by 0.8 pts at the composite level, albeit compared with a 16-month high in

January and remaining at satisfactory levels (60.6). On a positive note, consumer confidence improved meaningfully in February, by 1.5 pts to -6.6 (long-term average of -11.4).

- **Regarding performance by country, PMIs in Germany posted mixed changes across sectors, while the composite PMI improved in France.** These readings suggest that PMIs increased slightly in the rest of the euro area on a country-weighted basis (analytical data are due in early-March). In France, the composite PMI was up by 0.8 pts to 51.9 (consensus for 51.0), due to a recovery in services to 52.6, following a reading of 51.0 in January, which was likely negatively distorted by strikes during that month, especially in the national railway. The aforementioned improvement in services more than offset a deterioration in manufacturing PMI, down by 1.4 pts to a 7-month low of 49.7. Manufacturers cited softer demand in the automotive sector, the discontinuation of Boeing 737 Max production and disruptions related to coronavirus as factors depressing activity.
- **German PMIs were mixed.** Specifically, manufacturing PMI, despite remaining in contractionary territory, improved significantly for a 2<sup>nd</sup> consecutive month, to 47.8 in February, compared with 45.3 in January and 43.7 in December, well above consensus estimates for 44.8. Nevertheless, almost half of the aforementioned improvement in the headline index was due to a lengthening in supplier delivery times, which respondents mainly linked to coronavirus-related disruptions in China. Respondents also cited developments related to COVID-19 as an important factor for a decrease in new export orders (China represents c. 7% of Germany's goods exports), albeit total new orders largely held their ground on the back of strong domestic demand. Meanwhile, the services PMI was down by 0.9 pts to 53.3 (consensus: 53.8), largely offsetting the increase in its manufacturing counterpart. Indeed, overall the composite PMI was broadly unchanged at 51.1. On a similar note, the IFO business survey was insignificantly changed (+0.1 pt to 96.1), with a moderate increase in the expectations component (expectations for business conditions in the next six months | +0.5 pts to 93.4), offsetting a slight decline in the assessment of current conditions (-0.3 pts to 98.9). Sector-wise, improvement occurred in manufacturing (albeit remaining subdued), while confidence deteriorated slightly in the other sectors covered by the survey (services, trade and construction), although remaining at healthy levels.

### Steady UK business confidence in February

- **The UK composite PMI was stable in February at a satisfactory 53.3, thus sustaining its sharp post-election gain during January (+4.0 pts versus December) and modestly overshooting consensus expectations for 52.8.** The changes were mixed across sectors, with the manufacturing PMI up sharply by 1.9 pts to 51.9, a 10-month high and exceeding consensus estimates for 49.7. Nevertheless, the latest reading was positively distorted by a lengthening in supplier delivery times (as was also the case in euro area PMIs), a development that was linked to supply chain bottlenecks in Asia as indicated by respondents' comments. At the same time, PMI in the dominant services sector (80% of UK GDP) decreased by 0.6 pts to 53.3. On a positive note, private corporations' optimism remained high, with respondents' expectations for one year ahead output at its highest since June 2015.

## Equities

- Global equity markets lost ground in the past week, following an increase in the number of COVID-19 cases outside China.** Overall, the MSCI ACWI was down by -1.3% (+1.3% ytd), with both developed (-1.2% wow) and emerging markets (-2.0% wow) recording strong losses. In the US, the S&P500 declined by -1.3% wow, with the Technology sector leading the decline (-2.5% wow). The S&P500 12-month forward Price/Earnings ratio passed 19x for the first time since May 2002 on Wednesday, following its record high, falling slightly at 18.8x at the end of the week (20-year average: 15.4x). At the sector level, nine sectors have 12-month forward P/E ratios that exceed their 20-year averages, led by the Utilities (21.4x vs. 14.5x) and Consumer Discretionary (23.7x vs. 17.8x). Energy is the only sector with a P/E ratio below its 20-year average (16.7x vs. 17.0x). Regarding the earnings season, out of the 442 companies that have reported results so far, 71% have exceeded analyst estimates. Consensus EPS expectations for Q4:19 stand at +0.9% yoy from -2.2% yoy in the previous quarter. On Monday, however, the S&P500 index fell by 3.4% and volatility index (VIX index) rose to 25% (15% on average in the previous week) due health-related concerns. On the other side of the Atlantic, EuroStoxx fell by 0.9% wow, with Banks recording strong losses (-2.7% wow), on the back of lower yields. The decline intensified on Monday with EuroStoxx down by -3.9% and the DAX 30 by -4%.

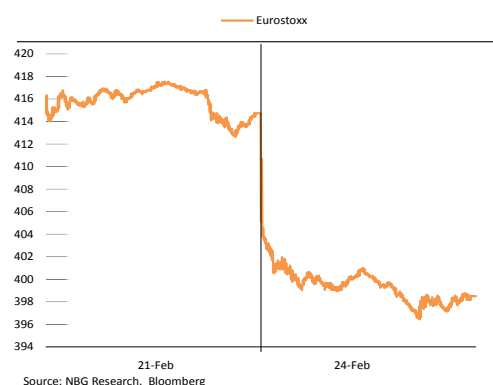

## Fixed Income

- Government bond yields declined in the past week due to increased safe-haven demand.** Specifically, US 10-year yields declined by 12 bps wow to 1.47%, the lowest since September 2019. Notably, its 2-year peer was down by 7 bps wow to 1.36%, while the 3-month US Treasury Bill yield stands at 1.55% (-2 bps wow). As a result, the spread between the US 3-month T-bill rate and the UST 10-year yield was in negative territory in the past week (-8 bps at the end of the week, -17 bps on Monday). Recall that an inverted yield curve (i.e. when long-term yields are above shorter-term ones) suggests that investors likely price-in a high probability of an economic downturn in the short to medium term. In Germany, the 10-year yield decreased by 3 bps wow to -0.43%. In Italy, 10-year yield declined by 1 bp wow to 0.91%, increasing by 6 bps on Monday to 0.96% after the COVID-19 outbreak worsened over the weekend, exacerbating concerns about the impact on the economy. **In a similar vein, corporate bond spreads in the US widened significantly.** Specifically, US HY spreads rose by 10 bps wow to 366 bps, while their euro area counterparts declined by 3 bps to 302 bps, mainly due to better-than-expected economic data (PMIs). In the investment grade spectrum, US spreads were up by 3 bps to 105 bps, while euro area IG spreads were broadly stable at 89 bps.

## FX and Commodities

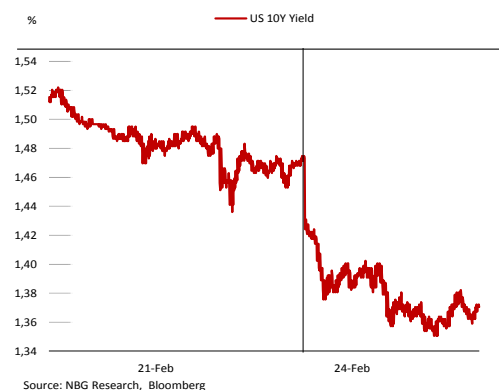

- In foreign exchange markets, the euro was broadly stable against the US Dollar** in the past week at \$1.085, rising by 0.6% wow on Friday, following the better-than-expected economic data in the euro area (PMIs) and slowing business activity in the US (Markit PMI). The Japanese Yen recorded strong losses, due to domestic virus concerns. Overall, the JPY fell by 1.8% against the euro to ¥121 and by 1.7% against the US dollar to ¥111.59, reaching a 10-month low intra-week. Meanwhile, the British Pound recorded losses in the past week (-0.7% against the US dollar to \$1.296 and -0.8% wow against the euro to €0.837), as better-than-expected retail sales failed to offset the drag from heightened uncertainty as both the EU and Britain appear to be hardening their stance before talks begin officially next month. Finally, **in commodities, oil prices rose in the past week after a smaller-than-expected rise in US crude stockpiles and as China leads stimulus efforts across Asia to cushion the impact from the coronavirus. However, on Friday and Monday oil prices declined as concerns increased regarding the impact of the COVID-19.** Specifically US oil inventories rose by 0.4 million barrels to 443 million barrels for the week ending February 14<sup>th</sup> vs expectations for +2.5 million barrels. Overall, Brent rose by 1.1% wow (-1.1% on Friday) to \$57.9/barrel (-3.9% on Monday), and WTI rose by 2.4% wow (-0.9% on Friday) to \$53.3/barrel.

## Economic Calendar

In the US, the main macro event next week is the second estimate of GDP for Q4:19, which is released on Thursday. GDP growth is expected to be unchanged compared with the previous estimate at 2.1% qoq saar. On Monday, ISM Manufacturing survey (latest: 50.9 | consensus of 50.5) will provide an update on business confidence.

In Japan, high frequency activity indicators for January (industrial production, retail sales) will be closely monitored to assess the economic momentum.

In China, February's PMI manufacturing is released on Monday. Official Manufacturing PMI is expected to decrease sharply at 47.4 from 50 in January.

China PMIs

**DISCLOSURES:**

This report has been produced by the Economic Research Division of the National Bank of Greece, which is regulated by the Bank of Greece, and is provided solely as a sheer reference for the information of experienced and sophisticated investors who are expected and considered to be fully able to make their own investment decisions without reliance on its contents, i.e. only after effecting their own independent enquiry from sources of the investors' sole choice. The information contained in this report does not constitute the provision of investment advice and under no circumstances is it to be used or considered as an offer or an invitation to buy or sell or a solicitation of an offer or invitation to buy or sell or enter into any agreement with respect to any security, product, service or investment. No information or opinion contained in this report shall constitute any representation or warranty as to future performance of any financial instrument, credit, currency rate or other market or economic measure. Past performance is not necessarily a reliable guide to future performance. National Bank of Greece and/or its affiliates shall not be liable in any matter whatsoever for any consequences (including but not limited to any direct, indirect or consequential losses, loss of profits and damages) of any reliance on or usage of this report and accepts no legal responsibility to any investor who directly or indirectly receives this report. The final investment decision must be made by the investor and the responsibility for the investment must be taken by the investor.

Any data provided in this report has been obtained from sources believed to be reliable but has not been independently verified. Because of the possibility of error on the part of such sources, National Bank of Greece does not guarantee the accuracy, timeliness or usefulness of any information. Information and opinions contained in this report are subject to change without notice and there is no obligation to update the information and opinions contained in this report. The National Bank of Greece and its affiliate companies, its representatives, its managers and/or its personnel or other persons related to it, accept no responsibility, or liability as to the accuracy, or completeness of the information contained in this report, or for any loss in general arising from any use of this report including investment decisions based on this report. This report does not constitute investment research or a research recommendation and as such it has not been prepared in accordance with legal requirements designed to promote investment research independence. This report does not purport to contain all the information that a prospective investor may require. Recipients of this report should independently evaluate particular information and opinions and seek the advice of their own professional and financial advisers in relation to any investment, financial, legal, business, tax, accounting or regulatory issues before making any investment or entering into any transaction in relation to information and opinions discussed herein.

National Bank of Greece has prepared and published this report wholly independently of any of its affiliates and thus any commitments, views, outlook, ratings or target prices expressed in these reports may differ substantially from any similar reports issued by affiliates which may be based upon different sources and methodologies.

This report is not directed to, or intended for distribution to use or use by, any person or entity that is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to any law, regulation or rule.

This report is protected under intellectual property laws and may not be altered, reproduced or redistributed, or passed on directly or indirectly, to any other party, in whole or in part, without the prior written consent of National Bank of Greece.

**ANALYST CERTIFICATION:**

The research analyst denoted by an "AC" on page 1 holds the certificate (type Δ) of the Hellenic Capital Market Commission/Bank of Greece which allows her/him to conduct market analysis and reporting and hereby certifies that all of the views expressed in this report accurately reflect his or her personal views solely, about any and all of the subject issues. Further, each of these individuals also certifies that no part of any of the report analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed in this report. Also, all opinions and estimates are subject to change without notice and there is no obligation for update.
